### **Bedridden And Intensive Care Patients**

Pressure (decubitus) ulcers occur in approximately 4% of hospitalized patients. Patients in intensive care units are particularly at risk because they are relatively immobile. Prolonged pressure, shearing forces, friction, and moisture are all etiological factors. Pressure ulcers may be complicated by infection and, rarely, carcinoma. Prevention depends on excellent nursing care that concentrates on meticulous skin care and relief of pressure. (Lorin E, Karin F, 1989)

To prevent this kind of situations there are some processes to follow;

- Keeping skin clean and dry.
- Avoiding any products that dry out your skin. This includes many soaps, body washes and talcum powder. Asking for skin cleansers that are non-drying.
- Using a water-based moisturiser daily.
- If there is a risk of pressure sores, a nurse will change your position often, including during the night.
- Always using any devices given to you to protect your skin from tearing and pressure sores. These may include protective mattresses, seat cushions, heel wedges and limb protectors.
- Following a regular diet. Sitting out of bed to eat if its possible.

With bedridden patients situations is more risky. Since their mobility is limited, their skin care and diets are very important. (Health, 2018)

### Urinary Incontinence

Urinary incontinence means , any uncontrolled (incontinence) leakage of urine. It's a very common and distressing problem. It has been identified as an important issue in Geriatric Health Care. (Ackley, 2010)

### Urinary Incontinence Associated Dermatitis

Many people who have incontinence will experience incontinence-associated dermatitis (IAD) at one point or another. This is especially common in older adults. Incontinence refers to patient body's inability to control the release of urine or stool. IAD occurs when the protective barrier created by skin is damaged. Exposure to the bacteria in urine or stool can result in painful symptoms, such as burning and itching. The condition primarily affects the area around genitals, thighs, and abdomen. IAD may also be referred to as perineal dermatitis, irritant dermatitis, moisture lesions, or even diaper rash, though these are all different conditions. (Healthline, 2018)

### Preventions For IAD

In addition to immune related and thermoregulation functions, the skin acts as a barrier between internal and external environments. It protects the body from exposure to irritants or toxic materials in the environment, while preventing excessive loss of fluids and electrolytes from the internal environment (Gray, 2010).

Prevention and management of IAD is based on two principles of care: avoiding contact between urine or stool and the skin, and providing a structured skin care regimen that protects the skin from the damaging effects of urinary and/or fecal incontinence. Management of urinary or fecal incontinence in the older person begins with non-invasive behavioral interventions such as diet and fluid management or toileting techniques, and may progress to pharmacologic or surgical interventions in selected cases.

Instituting a structured skin care regimen is essential because it protects vulnerable skin in the person with chronic incontinence that may not be able to achieve complete continence using available interventions, or the person with acute onset incontinence associated with a systemic infection or other disorder such as a stroke. A structured skin care regimen comprises three essential elements: cleansing the skin, application of a moisturizer, and application of a skin protectant (Beeckman, Woodward and Gray, 2011; Gray et al., 2007; Gray et al., 2012).

“

*For a better care Med-Cover products create;  
Barrier Layer, Soothes, Moisturizes, Cleans, Nourishes,  
Deodorize, Anti- Pruritic Effect, Anti-Bacterial Effect.*

”

## SHAMPOO CAP/ WASH CAP

Shampoo Cap, designed for cleaning and haircare for the head area of Inpatient, bedridden patients and patients who require special care such as intensive care patients. Removes dead cells from the hair with a special formulation. Helps keep the scalp healthy with Vitamin E and Provitamin B5. Shampoo cap provides comfortable and safety care operation. As in ordinary Shampoo Cap does not contain latex and does not cause allergies. Hair cleaning is

complete in a short time such as three minutes. Shampoo Cap suitable to common use cause do not include Alcohol, Lanolin and Latex. It effectively removes EEG gel, blood and iodine from head scalp.

## BARRIER CREAM PERINEAL WIPE

Especially in patients using diaper after a diapers, recommend after a diape change.

As a result of cleansing of highly basic products such as soap and water of the perineal area, the acid layer in the region (protective barrier layer) can be deformed. The skin that deforms the acid layer dries out.

Dry skin, creates cracks and fissures with an extremely favorable environment for the creation of urinary infection ruins in the area. Med-Cover Perineal Wipe takes up the role of degraded natural barrier layer with 3% Dimethicone in the content.

This layer provides the breathability and block transmission of liquid. Specially prepared for perineal region, the product will not damage the area with a soft tissue. The clearance in the region of urine and stool, as well as skin damage is seen to return to the natural structure with supporting components. Phospholipid to moisturize dry skin, offers a comfortable cleaning and maintenance facilities with special ingredients such as Chamomillia Extract and Vitamin E for the skin has lost its elasticity.

## BARRIER CREAM CLOTHS

Med-Cover Barrier Cream Cloths creating the barrier layer of the skin with a special formulation which also allows the daily cleaning needs. The clinical trials prove that the skin in moist conditions can better protect the integrity. Because there is elasticity capability.

Regular products eliminates elasticity capabilities which cause the drying of the skin, creating cracks in the skin then leads to disintegration.

Med-Cover Barrier Cream Cloths with 3% Dimethicone in product content helps to protect the skin from external factors by creating a barrier layer. Aloe Vera, Vitamins E, Chamomile Extract and Pro Vitamin B5 allows the skin to be more healthy. It also helps to recover the water lost from the skin with Phospholipid the content.

## ZINC OXIDE BARRIER CREAM

Med-Cover Barrier Cream used to protect against irritations and redness that may occur at the pressure points on the hospitalized patients and patients using adult diaper. It prevents the formation of dermatitis which can be caused by incontinence on the skin.

Med-Cover Barrier Cream helps prevent irritations that can occur when positioning in hospitalized patients.

Med-Cover Barrier Cream prevents maceration which may occur at the edge of the wound that prevents growth of the wound and contributes wound healing. Moisturizes the skin.

Med-Cover Barrier Cream does not prevent adhesion of the patch and the wound cover. Allows to easily leave flaster from skin. Med-Cover Barrier Cream is in concentrated cream form which is resistant to body fluids.

## TRANSPARENT BARRIER CREAM

Offers a smooth, viscous, grea- seless and fragrance-free mois- ture barrier. Provides a unique long-lasting protection of the skin. Provides a mechanical skin interface, for example against maceration. Resists wash-off and therefore does not need frequ- ent reapplication. Can be used to protect the skin from major factors:

- Wound exudates
- Urinary and faecal incontinence (acute/chronic)
- Digestive fluids
- Friction and shearing forces

**Contains:**

Cera Alba forms flexible protective layers on skin and enhances adhesion of formulations. Shea Butter has been designed keep your skin feeling soft, smooth and hydrated. Vitamin E Acetate protects the cells against free radicals and prevents the peroxidation of body fats. Panthenol has many beneficial uses to improve skin appearance because of its humectant properties. It helps soothe oxidative stress like redness, lines, and callouses. Panthenol helps hydrate skin and can speed up epidermal wound healing by strengthening the skin cells. Polymol Ipp is a non-oily ester, emollient and with good spreadability that provides a silky touch to products for skin, hair and bath. Cocoa Butter softens and smoothes the skin. Glycerin, a humectant, provides moisturizing and healing qualities to the skin because it attracts water. Sweet Almond Oil is rich in oleic and linoleic fatty acids and contains vitamins A, B1, B2 and B6 as well. Dimethicone creates barrier layer on the skin.

## RASH PREVENTER BABY WIPES

Dimethicone has the function of emollient, skin conditioning and skin protection. It forms a strong barrier on the skin which can help reduce water loss across the skin surface, but also help protect the skin from external factors (body fluids).

Vitamin E is known for its antioxidant properties which help to reduce free radical damage. It also helps improving the overall scalp and hair health. Vitamin E reducing the acute and chronic skin damage caused by UV irradiation.

Provitamin B5 has excellent anti-aging properties because it soothes, softens and moisturizes the skin and reduces the appearance of fine lines and wrinkles. Its exfoliating properties fight free radicals and promotes new skin cells. Pro-Vitamin B5 helps keeping the skin soft, smooth and healthy. It also has an anti-inflammatory effect that can help stimulate the skin's healing processes.

Glycerine is known as good moisturizer, eradication of itch.

Glycerine is a great moisturizer and humectant which protects water balance and skin.

## FOOT CARE CREAM FOR DIABETIC FOOT

Prepared for foot care and protection. Provides effective protection and moisturizing on dry, cracked heels and hard feet. With an effective combination of vegetable oils and vitamins, it softens the skin of the feet, helps prevent cracks and repair hard heels. Dry feet known as xerosis in patients with Type 1 and Type 2 diabetes lead to autonomic neuropathy, impaired sweat production, peripheral erythema, edema, atrophy and even aggravation of dry skin in the future. Dry skin, if left untreated, may develop fissures with a risk of ulceration. Also, when the foot is subjected to increased pressure and friction, the risk of developing a foot ulcer increases. Prevention of diabetic ulceration. It is important to prevent ulcers as they can not only cause significant discomfort and problems

to the patient, but can also lead to amputation as the most important consequence. When calluses and fissures increase, ulceration occurs. Regular use of a moisturizing cream formulated according to the needs of the diabetic foot can prevent this situation. For this reason, Med-Cover Foot Care Cream is an important supportive product for diabetic foot care.

# LICE CAP

NEW AND UNIQUE SOLUTION FOR LICE TREATMENT  
CE MARKED CLASS I M.D CE CERTIFICATE

What is a head lice cap ?

A thick cap that is impregnated with essential oils desinged to eradicate head lice. It looks and feels just like a regular shower cap.

The Med-Cover lice cap is different from mainstream head lice products as it doesn't contain the neurotoxins and pesticides that are often used to kill head lice. These chemicals (such as Permethrin) actually a common garden pesticide. Who would want that on their head?

Instead, the Med-Cover lice cap contains natural ingredients , such as tea tree oil , eucalyptus oil, aloe vera and levander oil.

Does it work ?

Yes , it really does. We took a different approach and with it we've achieved a 99.9% succes rate.

How does it work ?

Just because it's natural doesn't mean it's nice. The essential oil compounds pass through the cuticle of the louse and up to their trachea causing death by suffocation.

The reality is there is no 'nice' way to rid your hair of lice , and just two ways to get rid of them: using chemicals that can harm you , your hair and your scalp, or the Med-Cover way , that uses natural ingredients to kill the lice with no lasting impact on you or your hair.

## 5 BENEFITS OF MED-COVER LICE CAP

Very easy to apply as the patented Formula is contained inside a shower cap. No dripping, no water and no mess.

Results are visible within just 45 minutes. The head lice die from suffocation of the natural oils present in the cap. The natural oils present in the cap coat the lice , causing their suffocation and eradication.

There are no toxic chemicals, no harsh materials and no insecticides in our special Formula. The Med-Cover head lice cap is a natural treatment that uses only essential oils such as tea tree oil, eucalyptus oil , aloe vera and lavender.

The natural oils help to heal the scalp from painful bites and the results of scratching and itching. The soothing Aloe Vera and eucalyptus oils coat and clean the scalp with just one treatment.

Following treatment, hair is clean and Grease free, with no pesticides, silicone or plastics present in the scalp.

**MED-COVER**  
comfortably recover!

## Contains:

2 x Lice Caps  
1 x Nit Comb  
1 x Guidebook

### STEP BY STEP INSTRUCTIONS

Establish if there are any live head lice present, if you find anything check all of the family and inform close friends.

**1** Place the cap over your hair, making sure you have covered all of your hair and scalp down to the nape of your neck and the back of your ears.

**2** Massage your head through the cap, working the oil through the strands of hair and down to the scalp.

**Important:** Spend at least 2 minutes on this, ensuring that all your hair is coated with the oils.

**3** Leave in head for 10 minutes without touching or moving the lice cap.

**4** After the 10 minutes wait is up... **Repeat step 2 and 3 a further 3 times.** In total you should allow 40 minutes of resting time for the natural oils to work down to the scalp.

**5** Use the lice comb provided to methodically work through your hair to remove the dead lice and their eggs. Take your time with this as it's essential that you remove all the eggs that you can see. **Repeat step 5 daily for the next 3 days.**

After a further 2 weeks, then **repeat the whole process again** with the second cap to ensure that no lice have survived. It's unlikely that you will feel the need to repeat the process but you must do it anyway - as one nit that was left behind could cause a reinfestation.

## ADJUSTABLE FIRST AID CERVICAL COLLAR

MED-COVER Adjustable First Aid Cervical Collar suitable for immobilisation of head and neck to prevent further injury to casualty.

MED-COVER Adjustable First Aid Cervical Collar is necessary to avoid the compression of the cervical rachis for a poly-traumatized patient during moving or transportation.

Offers an ideal choice of size thanks to a simple and precise method of measuring with fingers. X-ray compatible Adjustable rip-apart closure.

One piece design enables efficient storage where space is limited.

# MED-COVER

comfortably recover !

## Intended Use

This product is intended to support the cervical spine in a neutral position during transport, along with other cervical and full-body immobilization devices (CSIDs and FBSIDs).

Cannula hook is provided for securing supplemental oxygen lines.

## Important

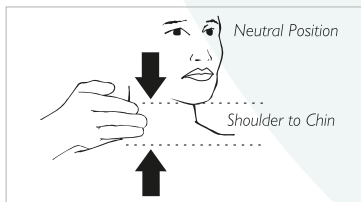

- In the case of a suspected spinal cord injury, appropriate neck immobilization is only part of the total immobilization.
- It is imperative that the patient be properly immobilized to prevent any movement of the spinal column.

## Cautions

- The Med-Cover first aid cervical collar should only be used by qualified healthcare providers.
- Misuse can cause injury or permanent disability. Always follow the local spinal immobilization protocol.
- Use the correct size collar. An oversized collar hyperextends a patient's cervical spine. An undersized collar may not provide proper stability.

## User Instructions

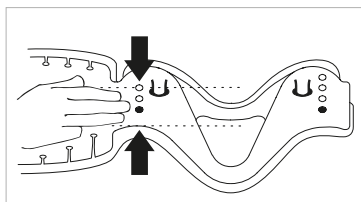

1. Measure the patient.

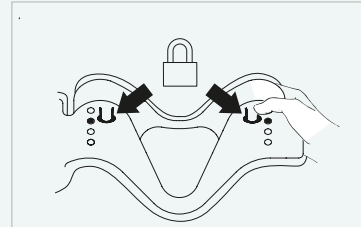

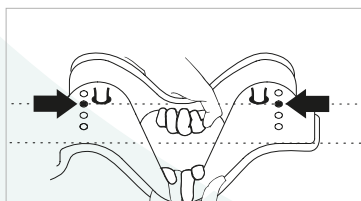

Align the head in the neutral or "eyes forward" position unless contraindicated by local protocol.

2. Adjust the neck collar to the patient:

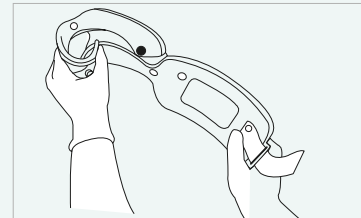

**Adult:** Choose one of 4 position  
**Pediatric:** Choose one of 3 position

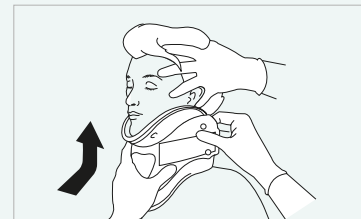

3. Adjust and Lock

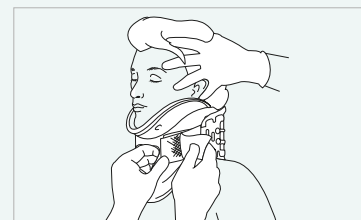

4. Fold the Collar

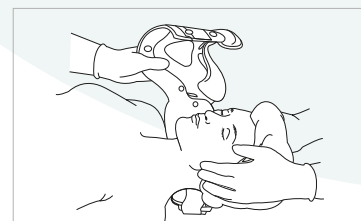

5. Apply neck collar while manually maintaining neutral head position.

Place the chin support under the chin. If a different size is needed, remove the collar, resize and reapply.

While holding the front in place, pull the back of the neck collar and then tighten.

For a supine patient, slide the back panel to the back of the neck before placing the chin support.
